SHALINI SRIVASTAVA

AI Engineer · Agentic AI, LLM, RAG and voice systems in production

srivastavaparidhi007@gmail.com | github.com/Shalini-Srivastavaaa | linkedin.com/in/shalini-srivastava-ai | shalini-srivastavaaa.github.io

Based in India · Full-time remote · Open to EOR employment · Available immediately · Can work US, EU or Gulf hours

SUMMARY

AI Engineer with 3+ years building production LLM, RAG, agentic and voice systems for companies in the US, EU and India. Built the search engine and RAG chatbot behind IndianCourtCases (127,000+ court documents, 50K+ users) and an AI calling system that has handled 20,000+ callers. Tests systems before and after launch: labeled retrieval test sets, scripted call scenarios, prompt regression tests, and latency and cost tracking.

EXPERIENCE

ElevenLabs · *AI Data & Model Evaluation Specialist (Independent Contractor)* Jun 2026 – Present

- Evaluate text-to-speech output: pairwise preference ratings for model alignment, voice-arena A/B tests and audio-quality review.

AI Engineer · Self-employed 2023 – 2026

Built and ran production AI systems for companies in the US, EU and India.

Wiz Imports (EU) · *Support-ticket search* Oct 2025 – Dec 2025

- Built a RAG search over the support team's Zendesk ticket history, with Cloud Vision OCR for image attachments, Pinecone retrieval and a Streamlit interface, so agents can find how similar issues were resolved; **95.3% recall@5** on a 200-query labeled evaluation set.

Hoarding Rescue (US) · *AI calling system (still in production)* Sep 2025 – Oct 2025

- Built the inbound and outbound AI calling system using Twilio, webhooks and tool calling. Includes warm handoff to human staff and post-call summaries. It has handled **20,000+ callers**, runs **up to 20 calls at once** and **cut manual telecalling by 92%**.
- Tested with scripted call scenarios before launch and regression-tested after every prompt or flow change; monitored call records, transcripts, tool calls, errors, cost and response latency.
- Diagnosed and fixed production issues including dropped calls, failed webhooks, incorrect tool execution and slow agent responses.

IndianCourtCases · *Legal search engine and RAG chatbot (still in production)* Dec 2024 – Aug 2025

- Built the document pipeline for a legal research platform with **50K+ users**: **127,000+ court PDFs** (1950–present) processed on AWS (S3, ECS, GPU instances), with structured metadata extracted from each.
- Built the Elasticsearch search engine and connected it to a RAG chatbot that returns relevant case files alongside its answers, with streaming responses and saved chat history; built the search and chat front end in React and TypeScript.
- Evaluated Elasticsearch retrieval across diverse legal search queries using **Precision@k, Recall@k, and NDCG@10**; observed a **97% query success rate** through manual relevance checks. Monitored p95/p99 latency and tested the search engine in Docker before deployment to Vultr.

AI agency (name confidential) · *Voice agents and RAG* Sep 2023 – Aug 2024

- Inbound voice agent for a notary business (Twilio, Google Calendar API) that handles appointment requests and books them on the owner's calendar in real time; **cut manual scheduling by about 95%**.
- Video captioning pipeline (Google Drive API, OpenAI API); RAG knowledge base over PDF, DOCX and TXT files (Pinecone, Streamlit).

PROJECTS

Tool-call verifier · *Agent reliability* · *PyTorch, transformers*

- Trained a small transformer that sits between an LLM agent and its tools and scores each tool call before it runs, so a wrong tool, a bad argument or a broken constraint can be stopped before it causes a failure.
- Built an 8-class failure taxonomy from real τ²-bench agent failures (adding a constraint-violation class after corpus analysis) and a frozen 116-example evaluation set (60 correct, 56 incorrect); benchmarked against a Gemini LLM judge.
- Implemented a Python rule-based guardrail baseline for tool-call reliability, validating argument schemas, detecting duplicate calls and checking for calls made after relevant tool errors; developed evaluation datasets for multi-turn state and constraint violations.

ClosingForce · *Multi-agent LLM workflow* · *LangGraph, Gemini, Whisper* GitHub

- Turns a recorded sales call into a MEDDPICC deal assessment, an objection map and a draft follow-up proposal: local Whisper transcription feeds a sequential LangGraph pipeline of four LLM agents, with retry and jittered backoff on Gemini rate limits and a Streamlit review dashboard.

Real-time AI voice agent with RAG · *Voice AI* · *LiveKit Agents, Gemini Live API*

- Streaming STT/TTS, VAD and turn detection so callers can interrupt naturally, plus function calling to take actions mid-call.
- Retrieves only the relevant business documents for each turn instead of loading all of them into the realtime model on every call, cutting cost and latency; keeps conversation memory across the call.

Skin-lesion classifier (HAM10000) · *Computer vision* · *ResNet-50 CNN* GitHub

- Classifies dermoscopic images into 7 categories with explainable predictions; lesion-aware splits keep all images of a lesion on one side of the train/test split.
- Compared class-imbalance fixes (augmentation, weighted sampling, weighted cross-entropy) against a baseline and kept the setup with the best validation macro-F1; final model: **82.23% accuracy and 0.666 macro-F1** on a 1,480-image held-out test set.

SKILLS

LLMs and agentic AI: OpenAI API, Gemini API, Claude API, LangGraph, multi-agent workflows, tool calling, RAG, vector search, hybrid search, embeddings, Elasticsearch, Pinecone, MCP, Guardrails

Voice: real-time voice agents (STT, TTS, VAD, turn detection), LiveKit Agents, OpenAI Realtime, Gemini Live, Twilio Voice and Media Streams, WebRTC, WebSockets, Deepgram, ElevenLabs, VAPI, Retell

Evals and monitoring: recall@k, NDCG, p95/p99 latency, LLM-judge baselines, scripted call tests, prompt regression tests, A/B evals, Langfuse, LangSmith, promptfoo, Ragas

ML / DL: PyTorch, TensorFlow, transformers, CNNs

Backend and deployment: Python, pytest, Pydantic, TypeScript, React, FastAPI, SQL, PostgreSQL, Docker, CI/CD, AWS, GCP, Vultr, REST APIs, webhooks, Git

EDUCATION

B.Tech, Computer Science & Engineering · *Haridwar University, Uttarakhand* · *CGPA 8.0/10*

Final year (coursework compatible with full-time remote work) · Expected May 2027
